Care

What is polymer Clay?

Polymer Clay is a Non-Toxic PVC based medium that allows one to mix, add things and shape it to our desire. Once created, they are oven 'baked', then sanded, drilled and assembled by my two hands with passion and love.

How to care for your Earrings

Polymer Clay, once cured, is a strong and durable medium. However, it still needs some TLC like any other jewellery and needs to be cared for and stored properly. We suggest a jewellery box or earring holder of any sort to avoid being broken or lost. Store your earrings out of direct sunlight and minimise exposure to dark, unwashed clothing, water, heat & perfume.

But most of all... enjoy them, wear them with pride and confidence.

With Love,

Kierrin
